

Configuring FirstClass Client for Quantum

Once you have installed the appropriate version of FirstClass for your machine and operating system, you need to tell it the Internet address of Quantum.

At the initial login screen click on Setup...:

Next, put Quantum.Isrhs.net in the Server field:

The image shows a settings dialog box with a light gray background and horizontal lines. At the top, there is a section labeled "Notifier" with a checkbox and the text "Notify me of new mail when offline". Below this is a text input field labeled "Notifier password:". Further down, there is a button labeled "Flush Cache" next to the text "Clears all nonconnection resources from your settings file". At the bottom right, there are two buttons: "Cancel" and "Save". The "Save" button is circled in red.

And click Save.

That's it! You can now type your UserID and password and click Login to connect.
